Exercícios - Resistência dos materiais 1

Junho 2019

Questão 5.5

```
P = 3750 \text{ N*m/s}
\omega = 175*2\pi/60 = 18{,}33 \text{ rad/s}
Assim:
P = T^*\omega
3750 = T*18,33
T = 204,58 \text{ N*m}
\tau = \mathrm{T}^*\mathrm{C}/\jmath
j = (\pi/2)^* C^4
100*10^6 = 204,58*C/(\pi/2)*C^4
157079632,7*C^3 = 204,58
C^3 = 1,3023*10^-6
C = 0.0192 m No entanto:
2*c = d
d = 2*10,92 = 21,84 \text{ mm}
Selecione um eixo com d=22~\mathrm{mm}
\emptyset = T*L/\jmath*G
```

Questão 5.8

```
\rm G=80~GPa d = 20 mm \rightarrow C = 10 mm \tau=45~\rm N^*m M = F*d \rm F_1=F_2=45/0.15=300~N Após calculado a força, podemos encontrar o momento na engrenagem C. M = F*d M = 300*0.075 = 22.5 N*m Calculando o ângulo de torção: \varnothing_C=\rm T^*L/\jmath^*G \jmath=\pi/2^*C^4=\pi/2^*0.01^4=1.57^*10^-5~m^4
```

```
\begin{array}{l} \varnothing_C = 22.5^*1.5/1.57^*10^-8^*80^*10^9 = 0.0268 \text{ rad} \\ \varnothing_B \to \varnothing_C^*\mathcal{C}_C = \varnothing_B^*\mathcal{C}_B \\ \varnothing_B = \varnothing_C^*\mathcal{C}_C/\mathcal{C}_B \\ \varnothing_B = 0.0268^*0.075/0.15 = 0.0134 \text{ rad} \\ \varnothing_A B = \mathrm{T^*L/j^*G} = 45^*2/1.57^*10^-8^*800^*10^9 = 0.0716 \text{ rad} \\ \varnothing_A B = 0.0716+0.0134 = 0.085049 \text{ rad} \end{array}
```

Questão 5.17

```
Eixo CD \to 75 N*m M = F*d F = 75/0,125 = 600 N 4 Calculando o momento em \epsilon: M_{\epsilon} = F*d = 600*0,05 = 30 N*m _{J} = \pi/2*C^4 = \pi/2*0,0175^4 _{T} CD= T*C/_{J} = 75*0,0175/_{\pi}/2*9,38*10^-8 = 8,9 MPa Para E: _{J} = \pi/2*0,015^4 _{T} E = 30*0,015/7,95*10<sup>-8</sup> = 5,66 MPa
```

Questão 5.51

```
\begin{split} & \text{G} = 75 \text{ GPa} \\ & \text{d} = 20 \text{ mmm} \\ & \text{r} = 0{,}010 \\ & \text{T}_BC = 80 \text{ N*m} \\ & \text{T}_CD = 80\text{-}20 = 60 \text{ N*m} \\ & \text{T}_DA = 60\text{+}30 = 90 \text{ N*m} \\ & \text{\emptyset}_B = (\text{T}_BC^*\text{L}_BC/\jmath^*\text{G}) + (\text{T}_CD^*\text{L}_CD/\jmath^*\text{G}) + (\text{T}_DA \text{ L}_DA/\jmath^*\text{G}) \\ & \text{\emptyset}_B = (20^*\text{0.8}/1178,097) + (60^*\text{0.6}/1178,097) + (90^*\text{0.2}/1178,097) \\ & \text{\emptyset}_B = 0{,}10016 \text{ rad} \end{split}
```
